THEJAS ELDHOS KURIAN

Data Scientist | Time Series Forecasting | Machine Learning | Python · PySpark · Azure
thejaseldhoskurian29@gmail.com | +91 9656261631 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data Scientist with 4+ years of experience building production forecasting and analytics solutions across energy and supply chain. Specialized in time-series forecasting, XGBoost-based machine learning, feature engineering, model selection and hyperparameter optimization, with hands-on experience in Python, PySpark, SQL and Azure. Built short- and long-term electricity load forecasts supporting ERCOT trading, hedging and portfolio planning, and previously delivered demand forecasting for 2,000+ inventory SKUs.

CORE SKILLS

Programming & Data: Python, PySpark, SQL, Pandas, NumPy

Machine Learning: XGBoost, Scikit-learn, Regression, Random Forest, Feature Engineering, RFECV, Optuna, Cross-Validation, Hyperparameter Optimization

Time Series & Forecasting: Demand Forecasting, Load Forecasting, Prophet, Moving Average, Lag/Rolling Features, Backtesting, MAPE, MAE, RMSE, WAPE, Forecast Bias

Cloud & Data Platforms: Azure Machine Learning, Azure Data Factory, Azure Databricks, Azure Synapse Analytics, REST APIs, SAP HANA

Analytics & Delivery: Power BI, DAX, Excel, Git, Data Pipelines, Model Monitoring, Production Inference

PROFESSIONAL EXPERIENCE

MOATIVE — Data Scientist Feb 2025 – Present

- Developed and supported an end-to-end load forecasting system covering 78K+ customer meters and ~54 load-profile × weather-zone models, producing forecasts used for hedging and power-procurement decisions across a ~220–235 MWh portfolio.
- Built 50 XGBoost forecasting models and 4 moving-average models, using RFECV for feature selection and Optuna for hyperparameter optimization; achieved approximately 2–3.5% MAPE for residential profiles and 3–5% for business profiles.
- Delivered daily 15-day short-term forecasts and backcasts before 6 AM CST for traders supporting ERCOT energy-market hedging and power-procurement decisions.
- Extended the forecasting framework to long-term horizons of up to 2 years for sales, portfolio growth and business-expansion planning, using hourly historical load and weather data.
- Automated weather-data ingestion from REST APIs through Azure Data Factory and integrated weather inputs into model-training and production-inference workflows.
- Worked with Python, PySpark, SQL and Azure ML to build scalable forecasting workflows, model inference pipelines and production-ready data outputs; created Power BI reporting for forecast and model-performance monitoring.

GEAKMINDS TECHNOLOGIES — Associate Data Scientist Jun 2022 – Jan 2025

- Built demand-forecasting and inventory analytics solutions for 2,000+ SKUs using SAP HANA data processed through Azure Synapse and Azure Databricks.
- Designed a forecasting framework using Prophet and moving-average models, with SKU segmentation driven by data availability and daily, weekly and monthly demand statistics; achieved approximately 15–20% aggregate MAPE.
- Produced 15-month demand and inventory outlooks covering stock availability, open orders, backorders and part-level demand to support recurring management reporting and inventory planning.
- Automated data preparation and monthly reporting workflows and provided three months of historical views for month-over-month comparison and business analysis.
- Developed Power BI dashboards and translated forecasting outputs, inventory KPIs and data-quality findings into actionable insights for business stakeholders.

EDUCATION

MSc Data Analytics — Baselius College, Kottayam, Kerala | Sep 2022 | GPA: 4.71/5.0

BSc Mathematics — SB College, Changanacherry, Kerala | Mar 2020 | GPA: 8.40/10
